

## **Step 4 : Try this experiment!**

Here is an experiment to try to see if your hypothesis (guess) was right.

Here are the things you will need:

- One glass full of water
- One empty glass
- Some paper towels

**Once you have your supplies, follow these steps:**

- 1) Twist two paper towels together into a paper rope.
- 2) Put the full glass and the empty glass side by side.
- 3) Put one end of the paper rope in the full glass then bend it carefully so the other end hangs inside the empty glass.
